MAINTENANCE MANUAL

MODEL:T5200
MODEL:T5200C

CHAP:1 HARDWARE OVERVIEW

SECT:1.1

1.1 GENERAL

Toshiba Personal Computer is a compact and advanced portable personal computer. The T5200 is a high-performance system with special features.
The CPU is the 80386-20 32-bit microprocessor, operated at 20 MHz with 32 Kbytes high speed cache memory.
The hard disk drive (HDD) has a capacity of 100 Mbytes (T5200/100 model) or 40 Mbytes (T5200 model)
The floppy disk drive (FDD) can support 2DD (720 Kbytes) and 2HD (1.44 Mbytes) floppy disks.
The standard memory has a capacity of 2 Mbytes, expandable up to 8 Mbytes maximum.
The plasma display supports high resolution video graphics (VGA compatible) with 640 by 480 pixels (dots) and 16-levels of gray scale.
The display mode is three mode, CGA mode, VGA-color mode, and VGA-monochrome mode.
The keyboard has 91/92-key with the keys of a subset of the industry standard 101/102-key keyboard. For most applications it can be used exactly like a standard typewriter keyboard.
The universal auto-sensing power supply is used for world- wide usage.
The T5200 includes two internal IBM compatible expansion slots (one full lenge 16-bit slot and one half lenge 8-bit slot) and one Toshiba T3100 size expansion slot.
The interface connector has one PRT/EXT. FDD connector (25-pin), two serial connectors (9-pin), and VGA connector (15-pin).

<fig id=MMS\5200\52001_1.TIF>Figure 1-1</fig> T5200 personal computer

<fig id=MMS\5200\52001_2.TIF>Page 1-2</fig>

SYSTEM UNIT

The configuration of the system unit is shown in figure 1-2.

<fig id=MMS\5200\52001_2.TIF>Figure 1-2</fig> System unit configuration

<fig id=MMS\5200\52001_3.TIF>Page 1-3</fig>

The key features of the system unit are:

- A system board, memory board, I/O board, high resolution graphics subsystem (HRGS) board, back panel board, and LED board.
- An internal 3.5-inch floppy disk drive (FDD) supporting two media types:
  2HD (double-side, high-density, double-track)
  2DD (double-side, double-density, double-track)
  The 2HD and 2DD floppy disks can be formatted with 1.44 Mbytes and 720 Kbytes of storage capacity respectively.

- An internal 3.5-inch hard disk drive (HDD) supporting two media types:
  - 100-Mbyte HDD (T5200/100 model)
  - 40-Mbyte HDD (T5200 model)

- An internal 91/92-key keyboard.

- An internal 640 X 480 pixel plasma display that has a 16-level gray scale capability. The display quality can be adjusted by contrast controls.

- A universal auto-sensing power supply that can be used world-wide provides +5VDC, +12VDC, -5VDC, and -12VDC power to all the components in the system unit, including the expansion board.
  For the plasma display, power supply provides the regulated +24VDC power to the DC-DC converter. The DC-DC converter converts from +24VDC power to +205VDC power, and provides to the plasma display.
  The power supply's ventilation fan is driven by +12VDC.

- A lithium battery that keeps the data and time in addition to the system configuration parameters even if the system power is switched off.

- The expansion slots can use the three slots types:
  - 8-bit half-size industry-standard slot
  - 16-bit full-size industry-standard slot
  - 16-bit Toshiba standard slot

  One 8-bit half-size industry-standard slot or one 16-bit Toshiba standard slot is used exclusively.

- The various ports are provided at rear of the system unit, such as 25-pin bidirectional parallel/external FDD connector, two 9-pin serial interface (I/F) connectors, and 15-pin VGA I/F connector.

1.2 MAIN BOARDS

Figure 1-3 shows the block diagram of the main boards.

<fig id=MMS\5200\52001_4.TIF>Figure 1-3</fig> Block diagram

<fig id=MMS\5200\52001_5.TIF>Page 1-5</fig>

1.2.1 System Board

System board is composed of the following components:

- Central processing unit: CPU (80386-20)
  The CPU is a 32-bit microprocessor operated at 20 MHz clock speed.

- Numeric data processor socket for the 80387-20 (optional).

- Real time clock: RTC (MC146818A)
  The RTC continuously keeps the date and time powered by lithium battery.

- Serial input output: SIO (NS16450)
  The SIO controls the serial port.

- Keyboard controller: KBC (8042)

- Keyboard scan controller: SCC (8749)

- Cache memory controller: (82385-20)

- Memory
  Read only memory: ROM 128 Kbytes (system BIOS)
  Static random access memory: SRAM 32 Kbytes (cache memory)

- One super integration: SI (T4758A)
  SI includes the two DMACs (equivalent to 82C37), two PICs (equivalent to 82C59), and one PIT (equivalent to 82C54)

- Gate arrays:
  The following gate arrays are used in the system board.

Memory controller gate array:	GA-MCNT3
Memory bus latch gate array:	GA-BLAT
Compatible bus latch gate array:	GA-CLAT
Bus controller gate array:	GA-BCNT2

<fig id=MMS\5200\52001_6.TIF>Page 1-6</fig>

1.2.2 Memory Board

Memory board is composed of the following components:

- Memory
  Random access memory: RAM 2 Mbytes
  Memory module socket: three 2-Mbyte memory module sockets

1.2.3 I/O Board and High Resolution Graphics Subsystem (HRGS) Board

I/O board and HRGS board are composed of the following components:

I/O board

- One supper integration: SI (T9761)
  SI includes the floppy disk drive (FDD)/Parallel input and output (PIO) controllers, one FDC (equivalent to TC8565), one SIO (equivalent to NS16450), and I/O decoders.
- Variable frequency oscillator: VFO (MB4108A)
  The VFO chip is used for FDD control logic.
- Basic graphics subsystem: BGS includes of the following ICs.
  - Display controller gate array: PDC-GA

(CGA compatible)
- Video RAM: 32 Kbytes
- Character Generator ROM: CG-ROM 64 Kbytes
  The CG-ROM supports four character font sets.

HRGS board
- Paradise video graphics array: PVGA1 (VGA compatible)
- High resolution graphics subsystem gate array: HRGS-GA
- Video RAM: 256 Kbytes
- Digital to analogue converter: DAC (IMS G171-35)
- HRGS BIOS ROM: 32 Kbytes

1.9 POWER SUPPLY UNIT

The universal auto-sensing power supply can be used worldwide and supplies +5, -5, +12, -12 and +24 VDC to the system.
The power supply unit is housed in the system unit and it supplies the regulated power to:

1) System board
2) Memory board
3) I/O board
4) HRGS board
5) 3.5-inch floppy disk drive
6) 3.5-inch hard disk drive
7) External keyboard
8) Plasma display
9) Option boards
10) Cooling fans

The above 2) through 7), 9) and one of cooling fans receive the power via system board.
The power supply unit includes an input line filter, line fuse, cooling

fan, power conversion circuitry and connectors.
Input ratings are:
115 VAC, 1.8 Amps or 230 VAC, 1.2 Amps
The power supply unit is shown in figure 1-10 and the output ratings are specified in table 1-6.

<fig id=MMS\5200\52001_14.TIF>Figure 1-10</fig> Power supply unit

CHAP:2 PROBLEM ISOLATION PROCEDURES
SECT:2.1, GENERAL
DOC_ID:2.1 T5200
LANG:ALL
TEXT:

<fig id=MMS\5200\52002_1.TIF>Page 2-1</fig>

2.1 GENERAL

The problem isolation procedures described in part 2 are used to isolate defective FRUs (field replaceable units).
The FRUs covered are:

1. Power supply unit
2. System board
3. FDD
4. HDD
5. Keyboard
6. Plasma display

Detailed replacement procedures are described in part 4 and test and diagnostics program operations are described in part 3.

The following items are necessary for implementing the problem isolation procedures.

1. T5200 diagnostics disk
2. Phillips head screwdriver
3. Blade head screwdriver
4. Tweezers
5. 2DD and 2HD formatted work disk (for FDD testing)
6. Cleaning disk kit (for FDD testing)
7. Multimeter
8. Printer port LED

The problem isolation flowchart described in section 2.2 can be used to determine which isolation procedures are necessary to isolate a T5200 problem.

2.2 PROBLEM ISOLATION FLOWCHART

The flowchart in figure 2-1 is used as a guide for determining which FRU is defective. Please confirm the followings before performing the flowchart procedures.

1. No disk is in the FDD.
2. All optional equipments are disconnected.
3. MS-DOS has been installed in drive C before a trouble happens.

<fig id=MMS\5200\52002_2.TIF>Page 2-2</fig>

<fig id=MMS\5200\52002_2.TIF>Figure 2-1</fig> Problem isolation flowchart

<fig id=MMS\5200\52002_3.TIF>Figure 2-1 (cont.)</fig> Problem isolation flowchart

1. If an error is detected on the system test, memory test, display test, or real timer test, perform the system board isolation procedures in section 2.4.

2. If an error is detected on the hard disk test, perform the HDD problem isolation procedures in section 2.6.

3. If an error is detected on the keyboard test, perform the keyboard problem isolation procedures in section 2.7.

4. If an error is detected on the floppy disk test, perform the FDD problem isolation procedures in section 2.5.

³WARNING: Dangerous high voltage is supplied to the power supply   ³
³unit. Pay enough attention on handling. It takes few minutes    after³
³power off to discharge the electricity.                           ³
ÀÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÙ
```

This section describes how to determine whether or not the power supply unit is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Power Indicator Check

PROCEDURE 2: Connector Check

PROCEDURE 3: Output Voltage Check

PROCEDURE 4: Power Supply Unit Replacement

<fig id=MMS\5200\52002_5.TIF>Page 2-5</fig>

PROCEDURE 1

Power Indicator Check

1. Turn on the power.

2. If the power indicator lights, go to PROCEDURE 3.
   If the indicator does not light, check the AC power cord connection. One end of the AC power cord should be inserted the standard AC wall outlet and the other end should be connected to the AC IN jack on the back of the system unit.
   If OK, replace the AC power cord.
   After replacing the AC power cord, if the indicator lights, the original cord was probably defective. If the indicator still doesn't light, go to PROCEDURE 2.

<fig id=MMS\5200\52002_6.TIF>Page 2-6</fig>

PROCEDURE 2

Connector Check

1. Turn off the power, then unplug the AC power cord.

2. Remove the top cover. (Refer to section 4.3.)

3. Remove the power supply unit. (Refer to section 4.9.)

4. If the power supply connector (PJ6 and PJ10) on the system board is connected properly, go to PROCEDURE 3.
   If it is not connected properly, reconnect it.

<fig id=MMS\5200\52002_7.TIF>Page 2-7</fig>

PROCEDURE 3

Output Voltage Check

1. Plug the AC power cord to the power supply unit, then turn on the power.

2. Use a multimeter to confirm that the output voltages of the three power supply connectors match to the values in table 2-1.

3. If the voltages are within the range of values given in table 2-1, the power supply unit is normal, but the system board is probably defective. Go to the system board isolation procedures in section 2.4.

4. If the voltages are still not within the range of values given in table 2-1, go to PROCEDURE 4.

Table 2-1 Power supply unit output voltages

Connector	Pin number +lead	Pin number -lead	Voltage (Vdc) Normal	Min	Max
For system board	1	2,4,5	24	19.2	28.8
	3	2,4,5	12	11.4	12.6
	6,7	2,4,5	5	4.75	5.25
For system board	1	3	-12	-13.2	-10.8
	2	3	-5	-5.25	-4.75
For cooling fan	1	2	12	11.4	12.6

<fig id=MMS\5200\52002_8.TIF>Page 2-8</fig>

PROCEDURE 4

Power Supply Unit Replacement

1. Turn off the power, then unplug the AC power cord.

2. Replace the power supply unit. (Refer to section 4.9.)

3. If normal operation is restored after replacing the power supply unit, the original power supply unit was probably defective.

4. If normal operation is not restored, another FRU is probably
defective. The defective unit must be isolated and replaced.

ºCAUTION: Before carrying out any of these procedures, make sure º
ºthat the FDD is empty. Performing these procedures with a floppy º
ºdisk in the FDD may result in loss of data. º
º
ÈÍÍ¼

This section describes how to determine whether or not the system, memory or I/O board is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Message Check

PROCEDURE 2: Printer Port LED Check

PROCEDURE 3: Test Program Execution

PROCEDURE 4: System Board Replacement

PROCEDURE 5: Memory Board Replacement

PROCEDURE 6: I/O Board Replacement

<fig id=MMS\5200\52002_10.TIF>Page 2-10</fig>

PROCEDURE 1

Message Check

1. Turn on the power.

2. If the system is loaded normally, go to PROCEDURE 3.

3. If the following message is displayed on the screen, press the F1
key. Execute the setup operation. (See the part 3 for details.)

```
**** Error in CMOS. Bad battery ****
Check system. Then, press [F1] key .....

**** Error in CMOS. Bad check sum ***
```

Check system. Then, press [F1] key .....

** Error in CMOS. Bad configuration **
Check system. Then, press [F1] key .....

*** Error in CMOS. Bad memory size ***
Check system. Then, press [F1] key .....

*** Error in CMOS. Bad time function **
Check system. Then, press [F1] key .....

4. If the following message is displayed on the screen, turn off the power. Wait 5 seconds or more, then turn on the power. If the following message is displayed again, go to HDD isolation procedures in section 2.6.

   ** BDD Load error or Bad system disk **
   Insert system disk in drive
   Press any key when ready .....

   Check system disk in drive
   Press any key when ready .....

   <fig id=MMS\5200\52002_11.TIF>Page 2-11</fig>

5. If the following message is displayed on the screen, the system may not be set up correctly. Go to the system setup menu and select the appropriate system configuration. (see the part 3 for details.) If the following message is displayed again, go to PROCEDURE 5.

   Video RAM error

   CRTC error

6. If the following message is displayed on the screen, go to PROCEDURE 4.

   CPU flag register error
   KBC IBF/OBF error
   KBC IBF error
   KBC self test error
   KBC OBF error
   CPU register error
   ROM checksum error
   PIT channel 2 error
   Cache memory verify error
   CMOS shutdown byte error
   DMA channel 0 error
   DMA channel 1 error

Memory verify error at X:X:X found X expected X
Error processor exceptional interrupts...
Refresh timing error
Error encountered initializing hard drive
First 64KB memory error
LIM page register error

7. If none of the above messages are displayed and you have a printer port LED, go to PROCEDURE 2.

<fig id=MMS\5200\52002_12.TIF>Page 2-12</fig>

PROCEDURE 2

Printer Port LED Check

1. Turn off the power.

2. Plug the printer port LED into the PRT/FDD connector on the back of the unit and set the A-B-PRT switch to PRT position.

3. While watching the printer port LED, turn on the power.
   The printer port LED will light when the power switch is turned on.

4. Read the final LED status from left to right as a hexadecimal value.

5. If the final LED status matches any of the error status values in the table 2-3, go to PROCEDURE 4.

6. If the final LED status is 32H, go to PROCEDURE 3.

Table 2-2 Printer port LED normal status

Status	Message
00H	Shutdown process and video initialization
01H	CPU test 1
02H	KBC test 1
03H	KBC test 2
04H	KBC test 3
05H	KBC test 4
06H	LSI initialization
07H	CPU test 2
08H	RTC initialization
09H	ROM checksum test
0AH	Video initialization
0BH	Reserved

<fig id=MMS\5200\52002_15.TIF>Page 2-15</fig>

PROCEDURE 3

Test Program Execution

1. Execute the following tests on the Diagnostic Test Menu. (Refer to part 3 Test and Diagnostics.)

    1. System test
    2. Memory test
    3. Keyboard test
    4. Display test
    5. Floppy disk test
    6. Printer test
    7. ASYNC test
    8. Hard disk test
    9. Real timer test

2. If an error is detected during the system test, ASYNC (SERIAL B) test, or real timer test, go to PROCEDURE 4.

3. If an error is detected during the memory test, go to PROCEDURE 5.

4. If an error is detected during the ASYNC test (SERIAL A) or printer test, go to PROCEDURE 6.

5. If an error is detected during the floppy disk test, go to FDD problem isolation procedures in section 2.5.

6. If an error is detected during the hard disk test, go to HDD

problem isolation procedures in section 2.6.

7. If an error is detected during the keyboard test, go to keyboard problem isolation procedures in section 2.7.

8. If an error is detected during the display test, go to display problem isolation procedures in section 2.8.

<fig id=MMS\5200\52002_16.TIF>Page 2-16</fig>

PROCEDURE 4

System Board Replacement

1. Replace the system board. (Refer to section 4.13.)

2. If normal operation is restored after replacing the system board, the original system board is probably defective.

3. If normal operation is not restored, another FRU is probably defective. The defective unit must be isolated by test and diagnostics program and replaced.

<fig id=MMS\5200\52002_17.TIF>Page 2-17</fig>

PROCEDURE 5

Memory Board Replacement

1. Replace the memory board. (Refer to section 4.11.)

2. If normal operation is restored after replacing the memory board, the original memory board is probably defective.

3. If normal operation is not restored, the system board is probably defective. Go to PROCEDURE 4.

<fig id=MMS\5200\52002_18.TIF>Page 2-18</fig>

PROCEDURE 6

I/O Board Replacement

1. Replace the I/O board. (Refer to section 4.10.)

2. If normal operation is restored after replacing the I/O board, the original I/O board is probably defective.

3. If normal operation is not restored, the system board is probably defective. Go to PROCEDURE 4.

DOC_ID:2.5 T5200
LANG:ALL

TEXT:

<fig id=MMS\5200\52002_19.TIF>Page 2-19</fig>

2.5 FLOPPY DISK DRIVE PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the floppy disk drive is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Test and Diagnostics Program Loading Check

PROCEDURE 2: Message Check

PROCEDURE 3: Head Cleaning

PROCEDURE 4: FDD Test Execution

PROCEDURE 5: FDD Connector Check

PROCEDURE 6: New FDD Connection

<fig id=MMS\5200\52002_20.TIF>Page 2-20</fig>

PROCEDURE 1

Test and Diagnostics Program Loading Check

1. Turn off the power.
2. Insert the diagnostics disk into the FDD.
3. Turn on the power.
4. If loading starts normally, go to PROCEDURE 3. (See section 3.2 to determine if loading has started normally.)
5. If loading has not started normally, go to PROCEDURE 2.

<fig id=MMS\5200\52002_21.TIF>Page 2-21</fig>

PROCEDURE 2

Message Check

1. When the power switch is turned on after the MS-DOS system disk is inserted into the FDD, message (a), (b), or (c) shown below may appear.

   (a) *** FDD A is not installed ***

   (b) Non-System disk or disk error Replace and press any key when ready

   (c) ** FDD load error or Bad system disk **
   Insert system disk in drive
   Press any key when ready .....

2. If message (a) is displayed, check that the A-B-PRT switch is set to PRT. If it is not set to PRT, set it to PRT. If it is set to PRT, go

to PROCEDURE 5.

3. If message (b) or (c) is displayed, the contents of the floppy disk is damaged, or a disk other than the MS-DOS system disk has been inserted into the FDD. Insert a new MS-DOS system disk into the FDD. If loading completes, go to PROCEDURE 4. If loading does not complete, go to PROCEDURE 3.

4. If none of the above messages appears, go to PROCEDURE 5.

<fig id=MMS\5200\52002_22.TIF>Page 2-22</fig>

PROCEDURE 3

Head Cleaning

1. Turn off the power.

2. Insert the cleaning disk into the FDD.

3. Turn on the power.

4. If normal operation is restored after cleaning the head, go to PROCEDURE 4.

5. If normal operation is not restored, go to PROCEDURE 5.

<fig id=MMS\5200\52002_23.TIF>Page 2-23</fig>

PROCEDURE 4

FDD Test Execution

1. Insert the diagnostics disk into the FDD. Then type a:testce52 and press Enter key.

2. Remove the diagnostics disk from the FDD, then insert the formatted work disk in.

3. Run the floppy disk test as indicated on the diagnostic test menu.

4. If an error is generated during the floppy disk test, an error code and status will be displayed. The error codes are described in table 2-4. Go to PROCEDURE 6.

5. If no error is generated, the FDD is normal.

Table 2-4 FDD error code

Code	Status
01	Bad Command
02	Address Mark Not Found
03	Write Protected
04	Record Not Found
06	Media Removed
08	DMA Overrun Error
09	DMA Boundary Error
10	CRC Error

```
                  ³ 20 ³ FDC Error             ³
                  ³ 40 ³ Seek Error            ³
                  ³ 60 ³ FDD Not Drive         ³
                  ³ 80 ³ Time Out Error        ³
                  ³ EE ³ Write Buffer Error    ³
                  ÀÄÄÄÄÁÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÙ
```

<fig id=MMS\5200\52002_24.TIF>Page 2-24</fig>

PROCEDURE 5

FDD Connector Check

1. Turn off the power, then unplug the AC power cord.

2. Remove the top cover. (Refer to section 4.3.)

3. Check that the FDD connection (PJ14) is secure.

4. If the FDD cable is securely connected to the system board, go to PROCEDURE 6.

5. If the FDD cable is not securely connected to the system board, secure the connection.

<fig id=MMS\5200\52002_25.TIF>Page 2-25</fig>

PROCEDURE 6

New FDD Connection

1. Turn off the power.

2. Remove the FDD. (Refer to section 4.7.)

3. Connect a new FDD to the FDD connector without installing the new FDD. Then connect all of the FRUs removed during FDD removal to their corresponding connectors without installing the FRUs.

4. Turn on the power.

5. If normal operation is restored, the original FDD is probably defective. Reassemble the system.

6. If normal operation is not restored, the system board is probably defective. Refer to section 2.4.

2.6 HARD DISK DRIVE PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the hard disk drive is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: HDD Indicator Check

PROCEDURE 2: Message Check

PROCEDURE 3: Format Execution

PROCEDURE 4: Hard Disk Test Execution

PROCEDURE 5: Connector Check

PROCEDURE 6: HDD Jumper Straps Check

PROCEDURE 7: New HDD Connection

<fig id=MMS\5200\52002_27.TIF>Page 2-27</fig>

PROCEDURE 1

HDD Indicator Check

1. Turn off the power.
2. If there is a floppy disk in the FDD, take it out.
3. Wait 5 seconds or more after turning off the power, then turn on the power.
4. If the HDD indicator blinks briefly, then goes out, go to PROCEDURE 2. If the HDD indicator continues blinking, go to PROCEDURE 4.
5. If the HDD indicator does not light at all, go to PROCEDURE 5.

<fig id=MMS\5200\52002_28.TIF>Page 2-28</fig>

PROCEDURE 2

Message Check

1. If the operating system is loaded normally, go to PROCEDURE 4.
2. If one of the following message is displayed on the screen, go to PROCEDURE 3.

```
**  HDD Load error or Bad system disk **
Insert system disk in drive.
Press any key when ready  .....

Check system disk in drive
Press any key when ready  .....
```

<fig id=MMS\5200\52002_29.TIF>Page 2-29</fig>

PROCEDURE 3

Format Execution

```
É͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸»
º CAUTION: The contents of the hard disk will be erased when the  º
º FORMAT command is run. Before running this test, transfer the   º
º contents of the hard disk to floppy disks. This can be done    withº
º the MS-DOS BACKUP command. (See the MS-DOS Manual for details.) º
È͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸¼
```

1. Insert the MS-DOS system disk into the FDD.

2. Make partition of the hard disk by entering the FDISK command. (See the MS-DOS Manual for details.)

3. Format the hard disk by entering the FORMAT command. (See the MS-DOS Manual for details.) At this time use /S switch to transfer the system program.

4. If normal operation is restored, the HDD is normal.

5. If normal operation is not restored, go to PROCEDURE 6.

<fig id=MMS\5200\52002_30.TIF>Page 2-30</fig>

PROCEDURE 4

Hard Disk Test Execution

```
É͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸»
º CAUTION: The contents of the hard disk will be erased when the   º
º test program is run. Before running this test, transfer the      º
º contents of the hard disk to floppy disks. This can be done with º
º the MS-DOS BACKUP command. (See the MS-DOS Manual for details.)  º
º
È͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸͸¼
```

1. Insert the diagnostics disk into the FDD. Then type a:testce52 and press Enter key and run the hard disk test as indicated on the diagnostic test menu.

2. If an error is detected during the hard disk test, an error code and status will be displayed; go to PROCEDURE 6. The error codes are described in table 25.

3. If no error is generated, the HDD is normal. Enter the MS-DOS FDISK command to make partition of the hard disk. Then enter the MS-DOS FORMAT command. (See the MS-DOS Manual for details.)

Table 2-5 HDD error code

Code	Status
01	Bad command error
02	Bad address mark
04	Record not found
05	HDC not reset
07	Drive not initialize
09	DMA boundary error
0A	Bad sector error

0B	Bad track error	
10	ECC error	
11	ECC recover enable	
20	HDC error	
40	Seek error	
80	Time out error	
AA	Drive not ready	
BB	Undefined	
CC	Write fault	
E0	Status error	
F0	Not sense error (HW.code=FF)	

<fig id=MMS\5200\52002_31.TIF>Page 2-31</fig>

PROCEDURE 5

Connector Check

1. Turn off the power, then unplug the AC power cord.

2. Remove the top cover. (Refer to section 4.8)

3. Check that the HDC signal cable (PJ9) and HDD power cable (PJ5) are secure.

4. If both cables are securely connected to the system board, go to PROCEDURE 6.

5. If the cables are not securely connected, secure them.

<fig id=MMS\5200\52002_32.TIF>Page 2-32</fig>

PROCEDURE 6

HDD Jumper Straps Check

1. Remove the disk support (Refer to section 4.5.).

2. Check that the jumper straps are set correctly as shown in figure 2-2 and described in table 2-6.

3. If the jumper straps are set correctly, go to PROCEDURE 7.

4. If the jumper straps are not set correctly, set them correctly.

Table 2-6 HDD bumper straps functions

Signal	Status
HSP	Open
CD	Short
DSP	Open
ACT	Short

<fig id=MMS\5200\52002_32.TIF>Figure 2-2</fig> HDD jumper straps

<fig id=MMS\5200\52002_33.TIF>Page 2-33</fig>

PROCEDURE 7

New HDD Connection

1. Turn off the power.

2. Remove the HDD. (Refer to section 4.6.)

3. Connect a new HDD to the system board without installing the HDD. Then connect all the FRUs removed during HDD removal without installing the FRUs.

4. If normal operation is restored, the original HDD is probably defective. Reassemble the system.

5. If normal operation is not restored, the system board is probably defective. Refer to section 2.4.

<fig id=MMS\5200\52002_36.TIF>Page 2-36</fig>

PROCEDURE 2

Keyboard Test Execution

1. Insert the diagnostics disk into the FDD. Then type a:testce52 and press Enter key and run the keyboard test as indicated on the diagnostic test menu.

2. If an error is detected during the test, go to PROCEDURE 3.

3. If no error is detected during the test, the keyboard is normal.

<fig id=MMS\5200\52002_37.TIF>Page 2-37</fig>

PROCEDURE 3

Connector Check

1. Turn off the power, then disconnect the AC power cord.

2. Lift up the top cover. (Refer to section 4.3.)

3. Lift up the keyboard and check that the keyboard cable (PJ1) is securely connected to the system board. If it is securely connected, go to PROCEDURE 4.

4. If it is not securely connected, secure it.

<fig id=MMS\5200\52002_38.TIF>Page 2-38</fig>

PROCEDURE 4

New Keyboard Connection

1. Turn off the power, then unplug the AC power cord.

2. Remove the keyboard. (Refer to section 4.2.)

3. Connect a new keyboard to the system board without installing it.

4. If normal operation is restored after connecting the new keyboard, the original keyboard is probably defective. Install the new keyboard.

5. If normal operation is not restored, the system board is probably defective. Refer to section 2.4.

2.8 PLASMA DISPLAY PROBLEM ISOLATION PROCEDURES

This section describes how to determine whether or not the plasma display is defective. Start with PROCEDURE 1 and continue with other procedures as instructed. The procedures described in this section are:

PROCEDURE 1: Display Check

PROCEDURE 2: Display Test Execution

PROCEDURE 3: PDP Connector Check

PROCEDURE 4: New PDP Connection

<fig id=MMS\5200\52002_40.TIF>Page 2-40</fig>

PROCEDURE 1

Display Check

1. Turn off the power.

2. Wait 5 seconds or more and turn on the power. After turning on the power, the following message should be displayed on the upper left-hand corner of the screen:

MEMORY TEST XXXXKB

3. If the above message appears, go to PROCEDURE 2.

4. If the above message does not appear:

   (a) Check that the contrast is correctly adjusted.

   (b) Check that CRT indicator is light. If CRT indicator is light,

hold the Ctrl key, then press the Home key.

After performing (a) and (b),   reperform steps 1 and 2. If the message in step 2 still fails to appear, go to PROCEDURE 3.

<fig id=MMS\5200\52002_41.TIF>Page 2-41</fig>

PROCEDURE 2

Display Test Execution

1. Insert the diagnostics disk into the FDD. Then type a:testce52 and press Enter key and run the display test as indicated on the diagnostic test menu.

2. If an error is detected during the display test, the system board is probably defective. Refer to section 2.4.

3. If no error is generated, the plasma display is normal.

<fig id=MMS\5200\52002_42.TIF>Page 2-42</fig>

PROCEDURE 3

PDP Connector Check

ÚÄÄ¿
³ WARNING: Dangerous high voltage is supplied to the   plasma³
³ display panel. Pay enough attention on handling.   ³
ÀÄÄÙ

1. Turn off the power, then unplug the AC power cord.

2. Remove the PDP without disconnecting the cables (Refer to section 4.5.) and check that the cables are securely connected to the plasma display board (Refer to figure 2-3.)

3. If the cable is securely connected, go to PROCEDURE 4.

4. If the cable is not securely connected, secure it.

<fig id=MMS\5200\52002_42.TIF>Figure 2-3</fig> PDP connector check

<fig id=MMS\5200\52002_43.TIF>Page 2-43</fig>

PROCEDURE 4

New PDP Connection

1. Connect a new PDP without installing it.

2. If normal operation is restored after connecting the new PDP, the original PDP is probably defective. Reassemble the system.

3. If normal operation is not restored, the system board is probably defective. Refer to section 2.4.

CHAP:3 TESTS AND DIAGNOSTICS
SECT:3.1, GENERAL
DOC_ID:3.1 T5200
LANG:ALL
TEXT:

<fig id=MMS\5200\52003_1.TIF>Page 3-1</fig>

3.1 GENERAL

This section explains test and diagnostics programs. That checks the functions of all hardware modules of the T5200. There are 19 programs grouped into two modules: the service program module (DIAGNOSTICS MENU) and test program module (DIAGNOSTIC TEST MENU).
The service program module is composed of 8 tasks:

1. HARD DISK FORMAT
2. SEEK TO LANDING ZONE (HDD)
3. HEAD CLEANING
4. LOG UTILITIES
5. RUNNING TEST
6. FDD UTILITIES
7. SYSTEM CONFIGURATION
8. SET UP

The test program module is composed of 11 tests:

1. SYSTEM TEST
2. MEMORY TEST
3. KEYBOARD TEST
4. DISPLAY TEST
5. FLOPPY DISK TEST
6. PRINTER TEST
7. ASYNC TEST
8. HARD DISK TEST
9. REAL TIMER TEST
10. NDP TEST
11. EXPANSION TEST

The following items are necessary for carrying out the test and diagnostic programs.

1. T5200 diagnostics disk
2. MS-DOS system disk
3. Formatted work disk (For FDD test)
4. Cleaning disk kit (For read cleaning)
5. Printer wraparound connector (For printer wraparound test)
6. RS-232-C wraparound connector (For ASYNC wraparound test)

Service personnel can use these programs to isolate problems by selecting the appropriate program and operation procedures described in section 3.2.

3.2 OPERATIONS

1. After run the MS-DOS, insert the diagnostics disk in the floppy disk drive.

2. Type in a:testce52, then press Enter.

3. The following display will appear:

```
TOSHIBA personal computer T5200 DIAGNOSTICS
version X.XX (c) copyright TOSHIBA Corp. 1988

DIAGNOSTICS MENU:

1 - DIAGNOSTIC TEST
2 - HARD DISK FORMAT
3 - SEEK TO LANDING ZONE (HDD)
4 - HEED CLEANING
5 - LOG UTILITIES
6 - RUNNING TEST
7 - FDD UTILITIES
8 - SYSTEM CONFIGURATION
9 - EXIT TO MS-DOS
0 - SETUP

PRESS [0] - [9] KEY
```

Detailed explanations of the service programs and the operations are given in section 3.17 to 3.24.

```
ÚÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄ¿
³NOTE: To stop the test program:                          ³
³(1)  During keyboard operation, press Ctrl + C           ³
³(2)  While running the test program, press Ctrl + Break  ³
ÀÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÙ
```

<fig id=MMS\5200\52003_3.TIF>Page 3-3</fig>

4. Type in 1, then press Enter and the following display will appear:

```
TOSHIBA personal computer T5200 DIAGNOSTICS
version X.XX (c) copyright TOSHIBA Corp. 1988
DIAGNOSTIC TEST MENU:
      1 - SYSTEM TEST
      2 - MEMORY TEST
      3 - KEYBOARD TEST
      4 - DISPLAY TEST
```

```
 5 - FLOPPY DISK TEST
 6 - PRINTER TEST
 7 - ASYNC TEST
 8 - HARD DISK TEST
 9 - REAL TIMER TEST
10 - NDP TEST
11 - EXPANSION TEST
88 - FDD & HDD ERROR RETRY COUNT SET
99 - EXIT TO DIAGNOSTICS MENU

PRESS [1] - [9] KEY
```

Numbers, 1 to 11 are diagnostic tests.
Number 88 is for setting the floppy disk drive and hard disk drive error retry count.
Number 99 is for returning to the DIAGNOSTIC MENU. When selecting the floppy disk test or hard disk test, special sub-messages will appear, as described in sections 3.8 and 3.11.

5. After typing in a test number (1 to 11) of the DIAGNOSTIC TEST MENU, pressing Enter displays as follows:

```
TEST NAME                                    XXXXXXX
SUB TEST   : XX
PASS COUNT : XXXXX       ERROR COUNT  : XXXXX
WRITE DATA : XX          READ DATA    : XX
ADDRESS    : XXXXXX      STATUS       : XXX
SUB-TEST MENU
01 - ROM CHECKSUM
02 - HW status
99 - Exit to DIAGNOSTIC  TEST MENU

SELECT SUB-TEST NUMBER ?
```

The screen shown above, for example, appears when you type 1 and Enter.

<fig id=MMS\5200\52003_4.TIF>Page 3-4</fig>

6. Select a subtest. Type in the subtest number, then press Enter. The following message will appear:

```
TEST LOOP (1:YES/2:NO) ?
```

ÚÄÄÄ¿
³NOTE: If you select KEYBOARD TEST, this message will not appear.³
ÀÄÄÄÙ

If you select YES (by typing in 1, then pressing Enter):
Each time a test cycle ends, it increments the pass counter by one and repeats the test cycle.

If you select NO (by typing in 2, then pressing Enter):
At the end of a test cycle, the test execution is terminated and you exit to the subtest menu.

7. Type in 1 or 2, then press Enter. The following message will appear:

ERROR STOP (1:YES/2:NO) ?

If you select YES (by typing in 1, then pressing Enter):
When an error occurs, the error status is displayed and execution of the test program stops and the operation guide is displayed on the right side of the display screen. If you select NO (by typing in 2, then pressing Enter): When an error occurs, the error status is displayed then the error counter is incremented by one and you go to the next test.

8. Type in 1 or 2, then press Enter and the test program will run. Each subtest is described in section 3.3.

9. When an error occurs during the test program, the following message will appear: (if you answer YES for ERROR STOP question,)

```
ERROR STATUS NAME     [[ HALT OPERATION ]]
                            1: Test End
                            2: Continue
                            3: Retry
```

1: Terminates the test program execution and exits to the subtest menu.
2: Continues the test.
3: Retries the test.

The error code and error status names are described in section 3.15.

3.4 SYSTEM TEST

Subtest 01 ROM checksum

This test performs the ROM checksum test on the system board.
(Test extent : E0000H - FFFFFH 128KB)

Subtest 02 H/W status

This test reads the system hardware status, then displays the status as shown below. Press Enter to return to the system test's SUB-TEST MENU. Table 3-2 describes the hardware status bits. If you want to return to the SYSTEM TEST menu, press Enter.

```
             76543210
H/W status = 10101100

     Bit7 ---              =
     Bit6 --- CPU clock    = 20MHz
     Bit5 --- Media type   = 2DD
     Bit4 --- FDD type     = 2MB
     Bit3 ---              =
     Bit2 --- Drive A/B    = Normal
     Bit1 --- External FDD = OFF
     Bit0 ---              =
```

Table 3-2 Hardware status bit

Items	H/W status	1	0
Bit7	Reserved		
Bit6	CPU clock	10MHz	20MHz
Bit5	Media Type	2DD	2HD
Bit4	FDD Type	1.6MB	2MB
Bit3	Reserved		
Bit2	Drive A/B	Normal	Change
Bit1	External FDD	ON	OFF
Bit0	Reserved

DOC_ID:3.5 T5200
LANG:ALL
TEXT:

<fig id=MMS\5200\52003_8.TIF>Page 3-8</fig>

3.5 MEMORY TEST

Subtest 01 RAM constant data (in real mode)

This subtest writes constant data to memory, then reads and compares it with the original data. The constant data is FFFFH, AAAAH, 5555H, 0101H, and 0000H.

Subtest 02 RAM address pattern data (in real mode)

This subtest creates an address pattern by XORing (Exclusive- ORing) the address segment and address offset, writes the address pattern into the segment address and the offset address, then reads and compares it with the original data.

Subtest 03 RAM refresh (in real mode)

This subtest writes 256 bytes of constant data to memory, then reads and compares it with the original data. The constant data is "AAAAH" and 5555H. There is a delay between the write and the read operations.

Subtest 04 Protected mode

This subtest writes fixed data and address data to memory (addresses 100000H to the max.) in protected mode, then reads and compares it with the original data.

Subtest 05 Protected mode for the memory module.

The same test as the subtest 04 is done for the memory module. Total memory module capacity is 2MB, 4MB, 6MB, 10MB or 12MB. After selecting the subtest, the following message will appear.

Extended memory size (1:2MB, 2:4MB, 3:6MB, 4:10MB, 5:12MB)?

<fig id=MMS\5200\52003_9.TIF>Page 3-9</fig>

Subtest 06 LIM/EMS (Expanded memory, in real mode)

The same test as the subtest 04 is done for expanded memory. Page frame address is D0000H to DFFFF. EMS port is 208H, 218H, 258H or 268H. After selecting the subtest, the following message will appear.

Warning: The contents of the EMS will be destroyed.
Press [Enter] key.

After pressing the Enter, the following message will appear.

[EMS port=XXXH, SET#=X, PAGE#=XXXX]
[EMS size Block#1=XXXXXKB, Block#2=XXXXXKB, Block#3=XXXXXKB, Block#4-XXXXKB]

Subtest 07 Cache memory

This subtest writes constant data (AAH and 55H) to cache memory (32KB), then reads and compares it with the original data. The test does with cache on or off, and judges the total test count for three seconds. It is OK, if: [test count when cache on > test count when cache off.] After selecting the subtest, the following message will appear.

3 second test count:
Cache on = XXXXX
Cache off = XXXXX

TEXT:

<fig id=MMS\5200\52003_17.TIF>Page 3-17</fig>

3.8 FLOPPY DISK TEST

ÉÍÍÍ»
ºCAUTION: Before running the floppy disk test, prepare a formatted workº
ºdisk and remove the diagnostics disk. Then insert the work disk into º
ºthe FDD. Because the contents of the floppy disk will be erased. º
ÈÍÍÍ¼

OPERATION

1. When you select the floppy disk test of the DIAGNOSTIC TEST MENU, the following message will appear under the DIAGNOSTIC TEST MENU.

   Test drive number select (1:FDD1,2:FDD2,0:FDD1&2) ?

2. Select the test drive number, then press the Enter. The following message will appear.

Media in drive#1 mode (0:2DD,1:2D,2:2D-2HD/2DD,3:2HD) ?

3. Select the media type of the floppy disk to be tested, then press the Enter. The following message will appear.

   Test start track (Enter:0/dd:00-79) ?

4. You can select the start track number of the floppy disk test. When pressing the Enter only, the start track number will be zero.
   If you desire, select the start track number. Then the subtest menu of the floppy disk test will appear.

5. During the floppy disk test, the message shown below will appear. The ADDRESS number indicates that the first XX shows a cylinder number, the third X shows a head number, and the last XX shows a sector number.

   The STATUS number indicates that the first X shows a drive number and the last XX shows an error status code.

```
FLOPPY DISK                              XXXXXXX

SUB-TEST   :  XX
PASS COUNT :  XXXXX     ERROR COUNT  : XXXXX
WRITE DATA :  XX        READ DATA    : XX
ADDRESS    :  XXXXXX    STATUS       : XXX
```

CONTENTS

Subtest 01 Sequential read

This subtest performs the CRC (cyclic redundancy check) with a continuous read operation of all tracks on a floppy disk.
2D (Double-sided, double-density): Track 0 to 39. 2DD (Double-sided, double-density, double-track) and 2HD (Double-sided, high-density, double-track): Track 0 to 79.
The start track can be specified at the previous stage.

Subtest 02 Sequential read/write

This subtest writes data to all tracks (as defined above) continuously and then reads the data out and compares it with the original data.
(The data pattern is B5ADADH repeated.)

Subtest 03 Random address/data

This subtest writes random data to random address on all tracks (as defined in subtest 01) and then reads the data out and compares it with the original data.

Subtest 04 Write specified address

This subtest writes the specified data on the specified address that you enter from the keyboard. You can specify the test data, track number, and head number.

Subtest 05   Read specified address

This subtest performs read operation on the specified address that you enter from the keyboard. You can specify the track number and head number.

3.9 PRINTER TEST

ÉÍÍÍ»
ºCAUTION: A printer (IBM compatible) must be connected to the system inº
ºorder to execute the test. Confirm that the A-B-PRT switch is set to º
ºPRT position. º

ÈÍÍÍ¼

CONTENTS

Subtest 01   Ripple pattern

This subtest prints characters for code 20H through 7EH line by line while shifting one character to the right at the beginning of each new line.

RIPPLE PATTERN DIAGRAM

<fig id=MMS\5200\52003_19.TIF>Figure</fig>

<fig id=MMS\5200\52003_20.TIF>Page 3-20</fig>

Subtest 02   Function

This subtest prints out various print type as shown below.

PRINTER TEST DISPLAY

<fig id=MMS\5200\52003_20.TIF>Figure</fig>

Subtest 03   Wraparound

ÚÄÄ¿
³NOTE: A printer wraparound connector is necessary for   ³
³executing this test. Wiring diagram of the printer   ³
³wraparound connector is described in section 3.25.   ³
³The data, control, and status lines will be checked   with³
³the printer wraparound connector.   ³
ÀÄÄÙ

OPERATION

1. When you select the subtest 01, 02 or 03, the following message will appear.

   Select the channel number (1-3) ?

   Select the printer channel number, then type in the number. The T5200 supports three printer channels.

2. After pressing the Enter, the subtest is executed.

~~
DOC:MAINTENANCE MANUAL
MODEL:T5200
MODEL:T5200C
CHAP:3 TESTS AND DIAGNOSTICS
SECT:3.10, ASYNC TEST
DOC_ID:3.10 T5200
LANG:ALL
TEXT:

<fig id=MMS\5200\52003_20.TIF>Page 3-20</fig>

3.10 ASYNC TEST

In subtest 01 to subtest 05, data transmission is done with the following format:

Speed: 9600 BPS
Data 8 bits and one parity bit (EVEN)
One stop bit
Data pattern: 20H to 7EH

<fig id=MMS\5200\52003_21.TIF>Page 3-21</fig>

Subtest 01   Wraparound (channel 1)

ÚÄÄ¿
³ NOTE: The RS-232-C wraparound connector must be connected to   ³
³ SERIAL A CONNECTOR to execute this test. The wiring diagram of   ³
³ the RS-232-C wraparound connector is described in section 3.25. ³
ÀÄÄÙ

A data send/receive test is performed with the wraparound connector for the channel 1.

Subtest 02   Board (#1) <=> board (#2)

ÚÄÄÄ¿
³ NOTE: The RS-232-C direct cable (9-pin to 9-pin must be connected ³
³ to channel 1 and 2 to execute this test. The wiring diagram of ³
³ the RS-232-C direct cable is described in section 3.25. ³
ÀÄÄÄÙ

The same test as the subtest 01 is performed for the channel #1 <=> #2.

Subtest 03 Point to point (send)

ÚÄÄÄ¿
³ NOTE: This subtest must be executed in condition that two ³
³ machines are connected with the RS-232-C direct cable and ³
³ one side should be set as `send' and the other set as ³
³ `receive'. The wiring diagram of the RS-232-C direct ³
³ cable is described in section 3.25. The subtest 03 ³
³ executed in one side and the subtest 04 executed in the ³
³ other will check the communication capability as follows: ³
ÀÄÄÄÙ

A block of data (20H to 7EH) is sent from one side to the other, and then returned back. The returned data is compared with the original one. This test is used to check whether the returned data are same as the original ones.

Subtest 04 Point to point (receive)

This subtest is used with the subtest 03 as described above.

<fig id=MMS\5200\52003_22.TIF>Page 3-22</fig>

Subtest 05 Card modem loopback

ÚÄÄÄ¿
³ NOTE: If there is no modem card in the system, this test ³
³ cannot be executed. ³
ÀÄÄÄÙ

This subtest is used to check whether the data to be sent from the modem card to the RS-232-C line is correct or not. This can be done with the loopback function inside the modem card.

Subtest 06 Card modem on-line test

ÚÄÄÄ¿
³ NOTE: This test requires two machines which are connected ³
³ to the PBX (Private Branch Exchange). One side is set as ³
³ `send' and the other set as `receive'. When both sides ³
³ are ready, you can start the test. ³
ÀÄÄÄÙ

In this subtest, data are sent from the `send' side to the `receive' side through the PBX. This subtest is used to check whether data transmission through a telephone line is done properly or not.

Subtest 07   Dial tester test

ÚÄÄ¿
³ NOTE: To execute this subtest, a dial tester must be   ³
³ connected to the system.   ³
ÀÄÄÙ

This subtest is carried out by sending the pulse dial and tone dial twice automatically.

[Pulse dial]: "1-2-3-4-5-6-7-8-9-0-1-2"

[Tone dial]: "1-2-3-4-5-6-7-8-9-*-0-#"

Subtest 08   Interrupt test (IRQ4, 3, 5)

This subtest generates the interrupt request levels 4, 3, 5 in this order, then checks if this function works correctly.

3.11 HARD DISK TEST

ÉÍÍ»
ºCAUTION: The contents of the hard disk will be erased when   subtestº
º02, 03, 04, 06, 08 or 09 is run. Before running the test,   transferº
ºthe contents of the hard disk on the floppy disk. This can be   doneº
ºwith the MS-DOS BACKUP command. After the test, enter the MS-DOS º
ºFDISK command, which will set the partition. Then enter the MS-DOSº
ºFORMAT command. (See the MS-DOS manual for details.)   º
ÈÍÍ¼

OPERATION

1. When you select the hard disk test of the DIAGNOSTIC TEST MENU, the following message will appear.

   Test drive number select (1:HDD, 2:HDD2, 0:HDD1&2) ?

2. Select the drive number of the hard disk to be tested and press the Enter. The following message will appear.

   HDC F/W error retry   (1:yes, 2:no) ?

3. This message is used to select whether to do retry operation or not when the hard disk controller detects an error. Select yes or no and

press the Enter. The following message will appear.

Data compare error dump (1:no, 2:yes) ?

4. This message is used to select whether to do dump operation or not when data compare error is detected. Select yes or no and press the Enter. The following message will appear.

Detail status display (1:no, 2:yes) ?

5. This message is used to select whether to display the detail status on the screen or not. The detail status are described in section 3.16. Select yes or no and press the Enter.

<fig id=MMS\5200\52003_24.TIF>Page 3-24</fig>

6. During the hard disk test, the message shown below will appear. The ADDRESS number indicates that the first XXX shows a cylinder number, the fourth X shows a head number, and the last XX shows a sector number. The STATUS number indicates that the first X shows a drive number and the last XX shows an error status code.

```
HARD DISK TEST           XXXXXXX

SUB-TEST:    XX
PASS COUNT:  XXXXX      ERROR COUNT: XXXXX
WRITE DATA:  XX         READ DATA:   XX
ADDRESS:     XXXXXX     STATUS:      XXX
```

CONTENTS

Subtest 01 Sequential read

This subtest performs forward reading of contents from track 0 to Max. and then performs reverse reading of the contents from Max. track to track 0.

Subtest 02 Address uniqueness

1. Selecting this subtest, the following message will appear.

   Read sequential select?

   1: Forward sequential
   2: Reverse sequential
   3: Random

2. Select one of the above and press the Enter.

This subtest writes the address data that is different sector by sector at each track, then reads and compares it to the original data. This test is done for all tracks.

Subtest 03 Random address/data

This subtest writes random data to random addresses (cylinder, head, sector) and then reads the data out and compares it to the original data.

<fig id=MMS\5200\52003_25.TIF>Page 3-25</fig>

Subtest 04 Cross talk & peak shift

This subtest writes the eight types of worst pattern data (shown below) that is shifted cylinder by cylinder then reads the data out and compares it to the original data.

Worst pattern data

1. B5ADAD
2. 4A5252
3. EB6DB6
4. 149249
5. 63B63B
6. 9C49C4
7. 2DB6DB
8. D24924

Subtest 05 Write/Read/Compare (CE)

This subtest writes B5ADADH worst pattern data to the CE cylinder and then reads the data out and compares it with the original data.

Subtest 06 Write specified address

This subtest writes specified data to a specified cylinder and head.

Subtest 07 Read specified address

This subtest reads data which has been written to a specified cylinder and head.

Subtest 08 ECC circuit (CE cylinder)

This subtest checks the ECC (Error check and correction) circuit functions to a specified cylinder and head.

Subtest 09 Sequential write

This subtest writes specified data of the two bytes to all cylinder.

Subtest 10 W-R-C specified address

This subtest writes specified data to the specified cylinder and head, then read and compare with original data.

3.12 REAL TIMER TEST

Subtest 01 Real time

A new date and time can be input during this subtest when the current date and time are displayed.
Operations for the test are as follows.

1. Selecting the subtest, the following message will appear.

   REAL TIME TEST 901000

   Current date: XX-XX-XXXX
   Current time: XX:XX:XX

   Enter new date:

   PRESS [ENTER) KEY TO EXIT TEST

2. If current date is not correct, input the current new date. Press the Enter, the Enter new time: message will appear.

3. If current time is not correct, input the current new time. Press the Enter, return to the subtest menu of the REAL TIME TEST.

Subtest 02 Backup memory

This subtest writes data (01H, 02H, 04H,..., 80H, FHH, FB, FD, ...7FH, AAH, 55H) to 50 bytes of the backup memory (addresses 0EH to 3FH), and then reads and compares it with the original data.

Subtest 03 Real time carry

³ CAUTION: When this test is executed, the current date and time is erased.

This subtest checks whether the real time clock increments the time displayed correctly (month, day, year, hour, minute, second).

3.16 HARD DISK TEST DETAIL STATUS

When an error occurs on the hard disk test, the following message will appear.

HDC status = XXXXXXXX

Detailed status of the hard disk test error is shown on the screen by eight-unit number. The first XXXX is error status and the last XXXX is not used.
Error status is composed of 2 bytes; the first byte shows the contents of the HDC status register in hexadecimal form and the other the error register of the HDC.
These contents are described in the table 3-4 and 3-5.

Table 3-4 HDC status register contents

Bit	Name	Description
7	BSY (busy)	"0" ... HDC is busy. "1" ... HDC is ready.
6	DRDY (drive ready)	"0" ... Hard disk drive is not ready to accept any command. "1" ... Hard disk drive is ready.
5	DWF (drive write fault)	"0" ... DWF error is not detected. "1" ... Write fault condition occurs.
4	DSC (drive seek complete)	"0" ... The hard disk drive heads are not settled over a track. "1" ... The hard disk drive heads are settled over a track.
3	DRQ (data request)	"0" ... Drive is not ready to transfer data. "1" ... Drive is ready for data transfer.
2	CORR (corrected data)	"0" ... Otherwise "1" ... Correctable data error is corrected.
1	IDX index	"0" ... Otherwise "1" ... Index is sensed.
0	ERR (error)	"0" ... Otherwise "1" ... The previous command was terminated with some error.

Table 3-5 Error register contents

Bit	Name	Description
7	BBK (bad block mark)	"0" ... Otherwise "1" ... A bad block mark is detected.
6	UNC (uncorrectable)	"0" ... There is no uncorrectable data error. "1" ... Uncorrectable data error has been detected.
5		Not used.
4	IDNF (identification)	"0" ... Otherwise "1" ... There was no ID field in the requested sector.
3		Not used.
2	ABRT (abort)	"0" ... Otherwise "1" ... Illegal command error or a drive status error occurs.
1	TK0 (track 0)	"0" ... The hard disk has found track 0 during a recalibrate command. "1" ... The hard disk could not found track 0 during a recalibrate command.
0		Not used.

CHAP:3 TESTS AND DIAGNOSTICS
SECT:3.17, HARD DISK FORMAT
DOC_ID:3.17 T5200
LANG:ALL
TEXT:

3.17 HARD DISK FORMAT

There are two types of hard disk formatting:

1. Physical formatting
2. Logical formatting

This program is for physical formatting of the hard disk; it can execute the following items.

1. All track FORMAT
2. Good track FORMAT
3. Bad track FORMAT
4. Bad track CHECK

> CAUTION: The contents of the hard disk will be erased when this program is run. Before running the program, transfer the contents of the hard disk on to a floppy disk. This can be done with the MS-DOS BACKUP command. (See the MS-DOS manual for details.)

<fig id=MMS\5200\52003_32.TIF>Page 3-32</fig>

3.17.1 Program description

1. All track FORMAT

   Performs physical formatting of hard disk in the manner shown below.

	40MB	100MB
Sector sequences:	1	1
Cylinders:	0 to 804	0 to 775
Heads:	0 to 3	0 to 7
Sectors:	1 to 26	1 to 33
Sector length:	512 bytes per sector	512 bytes per sector
Bad track:	MAX.40 tracks	MAX.50 tracks

2. Good track FORMAT

   Executes the formatting of a specified cylinder and track as a good track.

3. Bad track FORMAT

   Executes the formatting of a specified cylinder and track as a bad track.

4. Bad track CHECK

   Checks for bad tracks by performing a read operation for all tracks on the hard disk; a list of bad tracks is then displayed.

3.17.2 Operations

> CAUTION: After physical formatting is finished, enter the MS-DOS FDISK command, which will set the partition. Then enter the MS-DOS FORMAT command. (See the MS-DOS manual for details.)

<fig id=MMS\5200\52003_33.TIF>Page 3-33</fig>

1. After pressing 2 and Enter in the DIAGNOSTICS MENU, the following display will appear.

```
DIAGNOSTIC - HARD DISK FORMAT VX.XX
     1 - All track FORMAT
     2 - Good track FORMAT
```

3 - Bad track FORMAT
4 - Bad track CHECK
9 - Exit to DIAGNOSTICS MENU

Press [NUMBER) key ?

2. All track FORMAT Selection

(1) When all track FORMAT (1) is selected, the following message will appear.

Drive number select (1:#1, 2:#2) ?

(2) Select a drive number. Type the drive number and press Enter. The following message will appear.

Interleave number (3/1-3) ?

(3) Select an interleave number. (Usually select 1.) Type the number and press Enter. The following display will appear.

[HDD TYPE]: CYLINDER = XXX
[HDD TYPE]: READ = X
[HDD TYPE]: SECTOR = XX

[WARNING: Current DISK data will be completely destroyed]

Press [Bad track number (CCCH)] key ?

[[cylinder, head = XXX X]]

(4) After pressing the Enter, the [[cylinder, head = XXX X]] message will appear; then all cylinders of the hard disk are formatted and checked.

(5) After formatting the hard disk, the Format complete message will then appear.

(6) Press the Enter to return to the HARD DISK FORMAT menu.

<fig id=MMS\5200\52003_34.TIF>Page 3-34</fig>

3. Good track FORMAT or Bad track FORMAT Selection

(1) When Good track FORMAT or Bad track FORMAT is selected, the following message will appear.

Drive number select (1:#1, 2:#2) ?

(2) Select a drive number. Type the drive number and press Enter. The following message will appear.

Interleave number (3/1-3) ?

(3) Select an interleave number. (Usually select 1.) Type the number and press Enter. The following message will appear.

[HDD TYPE]: CYLINDER = XXX

[HDD TYPE]: READ   = X
[HDD TYPE]: SECTOR   = XX

Press [track number (CCCR)] key ?

(4) Type a track number (four digits) and press Enter. (The first three digits are the cylinder number and the last digit is the head number.) This executes the formatting of good tracks or bad tracks.

ÚÄÄ¿
³ NOTE: This program can format only one track per operation. ³
³ If it is desired to format several good tracks or bad   ³
³ tracks, repeat the operation as many times as necessary.   ³
ÀÄÄÙ

(5) After formatting the track of the hard disk, the Format complete message will appear.

(6) Press the Enter to return to the HARD DISK FORMAT menu.

4. Bad track CHECK Selection

(1) When Bad track CHECK is selected, the following message will appear.

Drive number select (1:#1, 2:#2) ?

(2) Select a drive number. Type the drive number and press Enter. The following message will appear.

Interleave number (3/1-3) ?

<fig id=MMS\5200\52003_35.TIF>Page 3-35</fig>

(3) Select an interleave number. (Usually select 1.) Type the number and press Enter.
When the following message appears, and bad tracks of the hard disk are checked.

[HDD TYPE]: CYLINDER = XXX
[HDD TYPE]: READ   = X
[HDD TYPE]: SECTOR   = XX

[[cylinder, head = XXX XX]]

(4) After checking the bad tracks of the hard disk, the Format complete message will appear.

(5) Press the Enter to return to the HARD DISK FORMAT menu.

     ³      ³   ³     Pass count         Write data           ³
     ³      ³   ³                                        Error status
name
     ³      ³   Subtest number
     ³     Test name
     Error count
```

[[1:Next, 2:prev, 3:Exit, 4:Clear, 5:Print, 6:FD   LogRead,
7:FD LogWrite]]

2. Error information displayed on the screen can be manipulated with the following key operation.

The 1 key scrolls the display to the next page.
The 2 key scrolls the display to the previous page.
The 3 key returns the display to the DIAGNOSTIC MENU.
The 4 key erases all error log information in RAM.
The 5 key outputs error log information to a printer.
The 6 key reads log information from a floppy disk.
The 7 key writes log information to a floppy disk.

3.21 RUNNING TEST

3.21.1 Program description

This program automatically runs the following tests in sequence.

1. System test (subtest number 01)
2. Memory test (subtest number 01, 02, 03, 04, 06)
3. Display test (subtest number 01 to 08)
4. FDD test (subtest number 02)
5. Printer test (subtest number 03)
6. Async test (subtest number 01)
7. HDD test (subtest number 01, 05)
8. Real timer (subtest number 02)

When running an FDD test, this system automatically decides whether there are one or two FDDs.

3.21.2 Operations

```
ÚÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄ¿
³ CAUTION: Do not forget to load a work disk. If a work disk is    not³
³ loaded, an error will be generated during FDD testing.            ³
ÀÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÙ
```

1. Remove the diagnostics disk and insert the work disk into the floppy disk drive.

2. After pressing 6 and Enter in the DIAGNOSTIC MENU, the following message will appear.

   Printer wrap around test (Y/N) ?

3. Select whether to execute the printer wraparound test (Yes) or not (No). Type Y or N and press Enter. (If Y is selected, a wraparound connector must be connected to the printer connector on the back of the unit.) The following message will appear.

   Async#1 wrap around test (Y/N) ?
   Async#2 wrap around test (Y/N) ?

4. Select whether to execute the test (Yes) or not (No). Type Y or N and press Enter. (If Y is selected, an RS-232-C wraparound connector must be connected to the SER. A or SER. B connector on the back of the unit.)

5. This program is repeated continuously. To stop the program, press Ctrl + Break.

TEXT:

<fig id=MMS\5200\52003_39.TIF>Page 3-39</fig>

3.22 FDD UTILITIES

3.22.1 Program description

These programs format and copy floppy disks, and display dump list for both the FDD and the HDD.

1. FORMAT

```
ÚÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄ¿
³ CAUTION: The program is for only floppy disk drive test. The     ³
³ program is different from the MS-DOS FORMAT command.              ³
ÀÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÄÙ
```

This program can format floppy disk (5.25-inch/3.5-inch) as follows.

(1) 2D:Double-sided, double-density, 48/67.5 TPI, MFM mode, 512 bytes, 9 sectors/track.

(2) 2DD:Double-sided, double-density, double-track, 96/135 TPI, MFM mode, 512 bytes, 9 sectors/track.

(3) 2HD:Double-sided, high-density, double-track, 96/135 TPI,
    MFM mode, 512 bytes, 18 sectors/track.

2. COPY

This program copies from source floppy disk to target floppy disk.

3. DUMP

This program displays the contents of floppy disks (both 3.5" and
5.25") and hard disk (designated sectors).

3.22.2 Operations

1. After pressing 7 and Enter key in the DIAGNOSTICS MENU, the
   following display will appear before program execution.

   [FDD UTILITIES]

        1: FORMAT
        2: COPY
        3: DUMP
        9: EXIT TO DIAGNOSTICS MENU

   PRESS [1] - [9] KEY

        <fig id=MMS\5200\52003_40.TIF>Page 3-40</fig>

2. FORMAT Selection

   (1) When FORMAT is selected, the following message appears.

        DIAGNOSTICS - FLOPPY DISK FORMAT: VX.XX
        Drive number select (1 = A:, 2 = B:) ?

   (2) Select a drive number. Type the number and the following
        message will then appear.

        Type select (0 :2DD-2DD, 1 :2D-2D, 2 :2D-2HD, 3 :2HD-2HD) ?

   (3) Select a media/drive type number. Type the number and the
        message similar to the below will appear.

        Warning: Disk data will be destroyed.
        Insert work disk into drive A
        Press any key when ready.

   (4) Remove the diagnostics disk from the FDD and insert the work
        disk; press any key.
        The following message will appear; formatting is then
        executed.

        [FDD TYPE]: TRACK = XXX
        [FDD TYPE]: HEAD   = X
        [FDD TYPE]: SECTOR = XX

        Format start

                                    [[track, head = XXX X]]

After the floppy disk is formatted, the following message will appear.

```
Format complete
Another format (1:Yes/2:No) ?
```

(5) If you type 1 and press Enter key, the display will return to the message in (3) above. If you type 2 the display will return to the DIAGNOSTICS MENU.

<fig id=MMS\5200\52003_41.TIF>Page 3-41</fig>

3. COPY Selection

(1) When COPY is selected, the following message will appear.

```
DIAGNOSTICS - FLOPPY DISK COPY: VX.XX
Type select (0:2DD-2DD, 1:2D-2D, 2:2D-2RD, 3:2RD-2HD) ?
```

(2) Select a media/drive type number. Type the number. The following message will then appear.

```
Insert source disk into drive A:
Press any key when ready.
```

(3) Remove the diagnostics disk from the FDD and insert the source disk; press any key. The following message will appear, then start the copy to memory.

```
[FDD TYPE]: TRACK  = XXX
[FDD TYPE]: READ   = X
[FDD TYPE]: SECTOR = XX

Copy start

                          [[track, head = XXX XX]]
```

(4) Remove the source disk from the FDD and insert the target disk (formatted); press any key. The [[track, head = XXX X]] message will appear, then start the copy to target disk. When coping cannot be done with one operation, message (2) is displayed again. Repeat the operation. After the floppy disk has been copied, the following message will appear.

```
Copy complete
Another copy (1:Yes/2:No) ?
```

(5) If you type 1 the display will return to the message in (1) above. If you type 2 the display will return to the DIAGNOSTICS MENU.

4. DUMP Selection

(1) When dump is selected, the following message will appear.

```
DIAGNOSTICS - HARD DISK & FLOPPY DISK DUMP: VX.XX
format type select (0:2DD,1:2D,2:2RD,3:HDD) ?
```

<fig id=MMS\5200\52003_42.TIF>Page 3-42</fig>

(2) Select a format type number. Type the number. If 3 is selected, the dump lists for the hard disk are displayed automatically.

0: Display a dump list for a floppy disk (2DD)
1: Display a dump list for a floppy disk (2D)
2: Display a dump list for a floppy disk (2HD)
3: Displays a dump list for a hard disk.

(3) If 0, 1, or 2 is selected, the following message will appear. If 3 is selected, the dump list will appear.

Select FDD number (1:A/2:B) ?

(4) Select an FDD drive number; the following message will then appear.

Insert source disk into drive A:
Press any key when ready.

(5) Remove the diagnostics disk from the FDD and insert a source disk; press any key. The Track number ?? message will then appear. Type the track number and press Enter.

(6) The Head number ? message will then appear. Type the head number and press Enter.

(7) The Sector number ?? message will then appear. Type the sector number and press Enter. The dump list for the floppy disk will be displayed.

(8) After a dump list appears on the screen, the Press number key (1:up,2:down,3:end) ? message will appear.

1. Displays the next sector dump.
2. Displays a previous sector dump.
3. Displays the following message.

Another dump (1:Yes/2:No) ?

(9) If you type 1 the display will return to the message shown after (1) above. If you type 2 the display will return to the DIAGNOSTICS MENU.

3.23 SYSTEM CONFIGURATION

3.23.1 Program description

This program displays the following system configuration.

1. BIOS ROM VERSION = VX.XX
2. Base memory size
3. Display type
4. A number of floppy disk drives
5. A number of async ports
6. A number of hard disk drives
7. A number of printer ports
8. Co-processor presents or not
9. Extended memory size

3.23.2 Operations

After pressing 8 and Enter key to select from the DIAGNOSTICS MENU, the following display will appear.

SYSTEM CONFIGURATION

*-BIOS ROM VERSION - VX.XX
*-640KB MEMORY
*-PLASMA DISPLAY
*-1 FLOPPY DISK DRIVE(S)
*-2 ASYNC ADAPTER(S)
*-1 HARD DISK DRIVE(S)
*-1 PRINTER ADAPTER(S)
*-0 MATH CO-PROCESSOR
*-0000KB EXTENDED MEMORY

PRESS [ENTER] KEY

Press Enter key to return to the DIAGNOSTICS MENU.

CHAP:3 TESTS AND DIAGNOSTICS
SECT:3.24, SETUP
DOC_ID:3.24 T5200
LANG:ALL
TEXT:

<fig id=MMS\5200\52003_44.TIF>Page 3-44</fig>

3.24 SETUP

3.24.1 Accessing the SETUP

Press: 0 followed by Enter, and the following screen appears:

[[System setup]]
1. Hard disk type =9-Cyl=776, h=8, S/T=33, Cap=100MB
2. Memory size
    System memory =640KB
    Extended memory= 1MB
    Expanded memory= 0MB+288KB(96KB used as a fast
                      ROM)

```
3.  Display
     Plasma display  adaptor   -VGA compatible  adaptor
     Display device           -Plasma
     Plasma display mode      -Color
     Plasma gray scale        -  Normal:Semi-bright
                                 Intense:Bright
4.  Printer port type         -Output port
5.  Serial port
     IRQ SIO base address     -3E8h
     Serial A IRQ level       -4 (I/O base address=3F8h)
     Serial B IRQ level       -3 (I/O base address-2F8h)
     Toshiba modem IRQ level  -Not used
6.   Bus speed                -High
     _??? moves between items, <----> selects values
     1 exits, F5 sets default, F10 record changes
```

The menu above shows an example of setup options as they may be currently stored in memory. Since the options shown reflect the previously set options, the display you can see may be different from the one above. The options shown under item 3, "Display", differ depending on the option selected for "Plasma display adaptor".

Notice that selecting the type of diskette drive is not an option. The T5200 automatically determines what type of internal diskette drive is installed. Also, you don't have to run the SETUP of DIAGNOSTICS MENU to use an external 5 1/4" diskette drive.

Press F1 if the setup options displayed accurately reflect your hardware configuration and no changes are necessary. The system restarts.

Changing Setup Values

You can change the setup automatically or manually.

<fig id=MMS\5200\52003_45.TIF>Page 3-45</fig>

Automatic Reset

Follow the steps to set the values automatically:

1. Press F5. This instructs the program to reset all the options to their factory preset values.
   The program calculates how much conventional, extended and expanded memory your T5200 has, based on whether or not you have memory expansion kits installed.

   Setup stores the value it calculates in configuration memory along with the factory preset values for the other options. The [[System setup]] menu displays the new values.

2. Confirm that the new values are correct. To change any option(s), go to the next section, Manual Reset.

3. If the new values are correct, press F1. The system restarts.

Manual Reset

Follow the steps to change any option(s) manually:

1. Notice the cursor (reverse display highlight bar). This cursor indicates which option is selected for change.

2. Use the up and down arrow keys (or Enter) to move the cursor between options.

3. When the cursor highlights the value of an option you want to change, use the left and right arrow keys to select alternate values.
   The possible values for each option are shown in the table below

4. When you are finished making changes, press F10 to record the new values in configuration memory.

5. SETUP displays this message:

   ARE YOU SURE? (Y/N)

   Review your changes. If you need to make more alterations, press N or Enter and go back to step 2.

6. If the new values are correct, press Y. The system restarts.

<fig id=MMS\5200\52003_46.TIF>Page 3-46</fig>

3.24.2 SETUP Descriptions

This section explains the possible values for each SETUP.

1. Hard Disk Type

As you change the values for this option using the right and left arrow keys, the setup program displays one of the following lines:

```
6 - Cyl=805, H=4, S/T=26, Cap=40MB
7 - Cyl=979, H=5, S/T=17, Cap=40MB
9 - Cyl=776, H=8, S/T=33, Cap=100MB
No drive
```

Drive Table

Abbreviation	Meaning
Cyl	number of cylinders
H	number of heads
S/T	number of sectors per track
Cap	capacity

2. Memory Size

Configuration memory involves selecting how much RAM the system use for each of the three types of memory: System memory, Extended memory, and Expanded memory.

You can change System memory to either 640KB or 512KB. The default value is 640KB.

For the purposes of SETUP, the second and third memory types are interrelated. Use these guidelines set Extended memory first:

Specify the size of extended memory in 0.5MB increments from 0MB to the maximum available. The maximum memory you have depends on whether or not memory expansion kits are installed. The preset size of extended memory is 1MB.

Each time you change the size of extended memory, you also change the size of expanded memory. Memory not used as extended memory is automatically allocated by the system as expanded memory. Here are two examples of how this procedure works:

<fig id=MMS\5200\52003_47.TIF>Page 3-47</fig>

Memory Example 1: You do not have the memory expansion kit installed (there's a maximum of 1MB available for extended memory). You specify 0.5MB of extended memory. The system automatically allocates 0.5MB as expanded memory.

Memory Example 2: You have one 2MB memory expansion kit installed (there's a maximum of 3MB available for extended memory). You specify 1MB of extended memory. The system automatically allocates 2MB as expanded memory.

Specify how you want to use the T5200's remaining memory, usually 384KB. Set this value through the Expanded memory value of the Memory size option. You have these choices:

blank — No additional memory is allocated for expanded memory. The only memory used as expanded memory is what was automatically assigned due to your choice for Extended memory. All remaining memory (except conventional memory) is used as extended memory.

288KB — If the display ROM is used, 288KB is allocated for expanded memory, in addition to memory allocated by your choice for Extended memory. The remaining 96KB is reserved for Fast ROM; this choice results in a noticeable increase in the T5200's operating speed. This is the preset value.

320KB — If the display ROM is not used, 320KB is allocated for expanded memory. The remaining 64KB is reserved for Fast ROM. This is another preset value.

384KB — All memory not otherwise allocated is reserved for expanded memory, in addition to memory allocated by your choice for Extended memory.

If you select 512KB conventional memory, the amount of possible expanded memory increases by 128KB. Instead of 0KB, 288KB, 320KB, and 384KB for the values, you have 0KB, 416KB, 448KB, and 512KB, respectively.

These tables summarize the Memory size values:

<fig id=MMS\5200\52003_48.TIF>Page 3-48</fig>

Extended/Expanded Memory Size Table

Base System Size Extended memory		Resulting Expanded Memory Size without expansion kit	Resulting Expanded Memory Size with expansion kit
Values			
640KB	0MB	1MB	3MB
	0.5MB	0.5MB	2.5MB
	1MB	0MB	2MB
If you installed one 2MB memory expansion kit:			
	1.5MB		1.5MB
	2MB		1MB
	2.5MB		0.5MB
	3MB		0MB

Beginning with the base system on the left, find the amount of extended memory you wish to use in the second column. The third and fourth columns show you how much expanded memory your T5200 will have with and without the memory expansion kit.

Additional Memory/Fast ROM Table

Expanded memory size values	Fast ROM used?	Total Extended used?	Total Expanded Memory
blank	No	384KB*+ value above	0KB value above
288KB*	Yes	Value above	288KB*+ value above
320KB*	Yes	Value above	320KB*+ value above
384KB*	No	Value above	384KB*+ value above

* Selecting the 512KB conventional memory increases these values by 128KB.

The table above shows how much additional extended or expanded memory to add to the expanded memory values in the previous table based on whether or not you use fast ROM.

<fig id=MMS\5200\52003_49.TIF>Page 3-49</fig>

3. Display

This option defines the setup for the internal display controller. The display setup items differ depending on the type of adaptor selected for the first item, Plasma display adaptor. The Plasma display adaptor has the following options:

-VGA compatible (This is the default setting)
-CGA compatible
-Not used

Plasma display adapter=VGA compatible

When the Plasma display adaptor option is set to VGA compatible, internal display controller is configured as a VGA compatible plasma/CRT controller. In this case the remaining setup options are:

Display device
Plasma display mode
Plasma gray scale

Display device: This option selects between using the CRT only (CRT mode), and using both the CRT and the plasma display simultaneously (dual display mode). In either case if a CRT is connected to the T5200, the display mode of the plasma display is set to either color or monochrome, according to the type of the CRT (color or monochrome). In the dual display mode, the display mode of the plasma display agrees with the mode of the CRT. In this case, the border section of the CRT is not displayed on the plasma display.

-Plasma: Specifies the dual display mode.this is the default setting.
-CRT: Specifies the CRT mode.

Plasma Display mode: If there isn't a CRT attached to the T5200, this option selects whether the plasma display uses monochrome mode or color mode. If there is a CRT attached to the T5200, the display mode of the plasma display is determined by the type of the CRT (either monochrome or color), and the setting for this option has no effect.

-Color: Displays in color mode.256 colors of color data are converted to 16 intensity levels of gray (orange) for the plasma display. This is the default setting.

-Monochrome: Displays in the monochrome mode.64 intensity levels of gray are converted to 16 intensity levels of gray (orange) for the plasma display.

<fig id=MMS\5200\52003_50.TIF>Page 3-50</fig>

-Plasma gray scale: This specifies the relationship between the brightness levels for characters displayed in normal and intense display modes. A setting of "Bright" indicates that the maximum brightness level (gray scale level 15) will be used to display characters, while a setting of "Semi-bright" indicates that a slightly lower brightness level (gray scale level 11) will be used.

Normal: Semi-bright Intense: Bright (this is the default setting.)

Normal: Bright Intense: Semi-bright

Plasma display adapter = CGA compatible

When the Plasma display adapter option is set to CGA compatible, the internal display controller is configured as a CGA compatible plasma controller. In this case the remaining setup options are:

Plasma gray scale mode
Plasma font style

plasma font set

Plasma gray scale mode: Select either 2 gray levels (T3100 compatible mode), or 16 gray levels that supports a display of 16 colors.

- T3100 compatible mode: Specifies 2 gray levels. This is the default setting.

- 16 gray scales mode: Specifies 16 gray scale levels.

Plasma font style: Select either single-dot font or double-dot font for both the Normal and the Intense character attributes.

- Normal: Single. Intense: Double. (This is the default value.)

- Normal: Single. Intense: Single. (If you select "16 gray scales mode" above, you must select this option.)

- Normal: Double. Intense: Double.

- Normal: double. Intense: Single.

<fig id=MMS\5200\52003_51.TIF>Page 3-51</fig>

Plasma font set: Select one of the following character font sets:

- Standard: Specifies the standard North American character set. (This is the default setting.)

- North European: Specifies the North European font.

- Canadian French: Specifies the Canadian french font.

- Reserved.

Plasma display adapter = Not used

The internal display controller is not used. There are no additional display options when this is selected.

4. Printer Port Type

This option sets the PRT/FDD connector on the rear panel of the T5200 to either an output-only or a bi-directional port. This option is valid only when the PRT/FDD connector is used for the printer, that is , the A B PRT switch is set to PRT. This setting depends on the printer or other parallel devices you attach to the PRT/FDD connector.

when you have printer connected, you should usually select output-only port.

-Output-only port (This is the default setting.)

-Bi-directional port

5. Serial Port

This option allows you to change the I/O addresses and interrupt

levels of the serial ports. The standard T5200 supports two serial ports and one expansion serial port.Since the I/O address of a serial port is automatically established according to its interrupt level, the SETUP program prompts you to specify only the interrupt level. The I/O address of a serial port which is given an interrupt level of 5, however, must be set to one of the two predetermined I/O addresses as shown below.

The relationship between the serial port interrupt levels and I/O addresses is shown below.

Interrupt Level	I/O Address
3	2F8H
4	3F8H
5	3E8H or 2E8H

<fig id=MMS\5200\52003_52.TIF>Page 3-52</fig>

The first setup item in the serial port setup menu sets the I/O address for the serial port that is to be given an interrupt level of 5.The SETUP program displays one of the following addresses as the possible I/O address:

3E8H 2E8H

You can select the appropriate one with the left and right arrow keys. The second through fourth items in the serial port setup menu set the interrupt level of the serial ports.

When the cursor is positioned on the second serial port setup menu item, the SETUP program displays the menu shown below. From this menu, you can select the interrupt levels to be assigned to the serial ports.

The menu indicates the specified interrupt levels in reverse video. You can select the appropriate ones with the left and right arrow keys. After selecting the interrupt levels, press the up or down arrow key, or the RETURN key. The menu will disappear and the original setup menu will reappear.

[Serial port setup menus]

```
Serial A IRQ level              = 4 3  4 3  4 3  4 3  4 3
Serial B IRQ level              = 3 4  5   5  5 5  - -  - -
Toshiba modem IRQ level         = - -  - -  3 4  3 4  - -
IRQ4 serial port base address  = 3F8H
IRQ3 serial port base address  = 2F8H
IRQ5 serial port base address  = 3E8H
```

Example 1: when not using an expansion card.

The following serial port interrupt level settings are recommended:

```
Serial A IRQ level = 4
Serial B IRQ level = 3
Toshiba modem IRQ level = -
```

Example 2: When using a Toshiba modem card

<fig id=MMS\5200\52003_53.TIF>Page 3-53</fig>

You need to set the optional port IRQ level according to the I/O address or interrupt level of the modem card that is specified by the communication software to be used. For example, set the serial port interrupt levels as shown below when the communications software assumes 2F8H as the I/O address of the modem.

Serial A IRQ level = 4

Serial B IRQ level = 5

Toshiba modem IRQ level = 3

or

Serial A IRQ level = 4

Serial B IRQ level = -

Toshiba modem IRQ level = 3

Example 3: When using a modem card for the IBM PC

Check the I/O address of the modem card and make sure that it does not conflict with that of the serial A and B. For example, set the serial port interrupt levels as shown below when the I/O address of the modem card is 2F8H.

Serial A IRQ level = 4

Serial B IRQ level = 5

Toshiba modem IRQ level = -

6. Bus Speed

This option selects the system bus speed. Some option boards are dependent on the system bus speed.

-High: High selects the maximum CPU speed and the maximum bus speed.

-Normal: Normal selects the maximum CPU speed and the low bus speed. This setting makes the T5200 bus compatible with the IBM PC AT bus.

-Low: Low selects the low CPU speed and the low bus speed. This setting makes the T5200 bus and CPU speed compatible with the IBM PC AT.

CHAP:4 REPLACEMENT PROCEDURES
SECT:4.1, GENERAL
DOC_ID:4.1 T5200
LANG:ALL
TEXT:

<fig id=MMS\5200\52004_1.TIF>Page 4-1</fig>

4.1 GENERAL

This section gives a detailed description of the procedures for removing and replacing FRUs (field replaceable units).

FRUs are listed as follows:

1. Keyboard
2. Speaker
3. Top cover
4. Fan
5. LED board
6. Lithium battery
7. Disk support
8. HDD (hard disk drive)
9. FDD (floppy disk drive)
10. Display connector
11. Sensor guide
12. Power supply unit
13. Connector board unit
14. Memory board
15. Expansion connector board
16. System board
17. PDP (plasma display panel) unit
18. Converter board
19. Volume board
20. Latch assembly

The following points must be kept in mind:

1. The system should never be disassembled unless there is a problem (abnormal operation, etc.)

2. Only approved tools may be used.

3. After deciding the purpose of replacing the unit, and the procedures required, do not carry out any other procedures which are not absolutely necessary.

4. Be sure to turn the POWER switch off before beginning.

5. Be sure to disconnect the AC cord and all external cables from the system.

6. Follow the only fixed, standard procedures.

7. After replacing a unit, confirm that the system is operating normally.

Tools needed for unit replacement:

1. Phillips head screwdriver

LANG:ALL
TEXT:

<fig id=MMS\5200\52004_2.TIF>Page 4-2</fig>

4.2 REMOVING/REPLACING THE KEYBOARD AND THE SPEAKER

1. Remove the AC power cord from the unit.

2. Turn the unit upside down and remove the four screws (A)from the bottom cover.

<fig id=MMS\5200\52004_2.TIF>Figure 4-1</fig> Removing the four screws

3. Turn the unit back over then open the display.

4. Lift up the front edge of the keyboard unit (B) and place it front of the computer. At this time, you can not disconnect the keyboard cable.

<fig id=MMS\5200\52004_2.TIF>Figure 4-2</fig> Removing the keyboard unit

<fig id=MMS\5200\52004_3.TIF>Page 4-3</fig>

5. Remove the two screws (C) to remove the shield plate (D)from system board.

6. Release the pressure plate (E) of the keyboard connector PJ1 (F) to disconnect the keyboard cable (G) from the system board (H)

<fig id=MMS\5200\52004_3.TIF>Figure 4-3</fig> Removing the shield plate and disconnect the keyboard
cable

7. Unlatch the two latches (I) of the keyboard mask (J), then pull out the keyboard (K).

<fig id=MMS\5200\52004_3.TIF>Figure 4-4</fig> Removing the keyboard

<fig id=MMS\5200\52004_4.TIF>Page 4-4</fig>

8. Disconnect the speaker connector PJ4 (K) from the system board and unlatch the two latches (L) of the bottom cover, then pull out the

speaker (M)

<fig id=MMS\5200\52004_4.TIF>Figure 4-5</fig> Removing the speaker

9. To install the keyboard and the speaker, follow the above procedures in reverse.
